Vulnerable to poor Mental Health in Dorset

1 in 4 people

Highly Vulnerable to poor mental health

In WEYMOUTH & PORTLAND

Why mental health is of importance

- Mental illnesses are very common
- Among people under 65, nearly half of all ill health is mental illness
- Mental illness is generally more debilitating than most chronic physical conditions
- Mental health problems impose a total economic and social cost of over £105bn a year in the UK
- Yet, only a quarter of all those with mental illness such as depression are in treatment
- People with poor physical health are at higher risk of experiencing mental health problems
- People with poor mental health are more likely to have poor physical health.

Bournemouth, Dorset and Poole mental health facts

- One in three people with depression and one in two with anxiety do not seek help
- One in four people in their life will have a mental health issue and one in six people at any one time will have a mental health issue
- In Bournemouth, Dorset and Poole, this means about 130,000 people out of 800,000 at any one time will have a mental health issue
- Most people have ‘common’ mental health problems like anxiety and or depression and this equates in Bournemouth, Dorset and Poole to about 50,000 people
- Fewer people have more serious mental health conditions like schizophrenia or bipolar disorder in Bournemouth, Dorset and Poole this is about 8,000 people
- About 13,000 people in Bournemouth, Dorset and Poole have dementia with approximately 9,000 living in the community and 4,000 in care.
Areas in Dorset vulnerable to poor mental health

Identifying those at risk

To identify those at most risk we need to identify areas where poor mental health is most likely to occur.

Using Experian MOSAIC data, a ‘mental health index’ has been created to identify areas with a high vulnerability to poor mental health across the Dorset County Council area.

The index included variables measuring self-reporting of common mental health issues as well as diagnostic data. Factors such as multiple deprivation, low income, low educational attainment, and low levels of social capital all have a significant relationship with vulnerability to poor mental health.

Those areas across Dorset with households most vulnerable to poor mental health can then be identified once mapped, as seen above.

What can be done?

The data and research that has been undertaken here can be used to help identify households potentially at risk. The ‘mental health map’ could enable resources to be targeted at the people and places that need them the most.

This work should also be utilised in future research and help to inform and prioritise service delivery and early intervention initiatives that combat poor mental health.
